

AMENDMENTS TO THE SPECIFICATION:

Please amend the Abstract as follows:

A dosing device [[(1)]] for feeding an infusion product comprises a rotary drum [[(2)]] positioned between a web [[(3)]] of filter material and a hopper [[(4)]] for containing the infusion product; the drum [[(2)]] having a plurality of radial cells [[(5)]] made in it for containing the infusion product and in which ~~there slide piston type dosing means in each cell is a sliding dosing piston~~ [[(6)]]; each dosing piston [[(6)]] being driven axially by respective eccentric cam actuating means [[(7)]] between two end positions, one of which corresponds to a top dead centre [[(PMS)]] where each dosing cell [[(5)]] faces the hopper [[(4)]] in order to receive a quantity of the infusion product, and the other corresponds to a bottom dead centre [[(PMI)]] where the dosing cell [[(5)]] faces the web [[(3)]] of filter material in order to discharge the quantity of infusion product onto the web [[(3)]] of filter material. Between the actuating means [[(7)]] and each piston [[(6)]] there are crank mechanisms [[(8)]] designed to act coaxially on the piston [[(6)]] in such a way as to enable the piston [[(6)]] to move in a direction that is perfectly aligned with a longitudinal axis [[(Z)]] of the respective dosing cell [[(5)]].
